TECH, EXPLAINED

# 1,074 checks before anyone sees an update

How we release changes to a system that staff use every day.

INSIDE

1 Why it matters

2 Staging first

3 1,074 automated checks

4 Every page, as every role

5 One switch, and a way back

**Vishan Amarnath** · Co-founder & CTO, Bizzzauto

# Why it matters

Staff across several branches use it every day. If an update breaks a page, they find out in the middle of a shift.

# Staging first

Every change lands on a copy of the system before it touches the real one.

# 1,074 automated checks

They run on that copy before every release.

THE TEST SUITE

**28 files · 1,074 checks**

# Every page, as every role

840 page loads. A page that works for the admin can still break for a telecaller.

# One switch, and a way back

Everyone moves to the new version at the same moment. If something fails after going live, it rolls back on its own.

AND THEN

- Every release sends us a WhatsApp notice

THE RELEASE GATE

# Boring is the goal.

1. A staging copy first
2. 1,074 automated checks
3. 840 page loads, every role
4. One switch to go live
5. Automatic rollback

**How do you find out when something your business runs on breaks?**
