INSTAGRAM AUTOMATION, EXPLAINED

3 to 4 accounts banned. Same cause every time.

Automation that pushed Instagram too hard. Here are the setups that cause trouble, and the one we use instead.

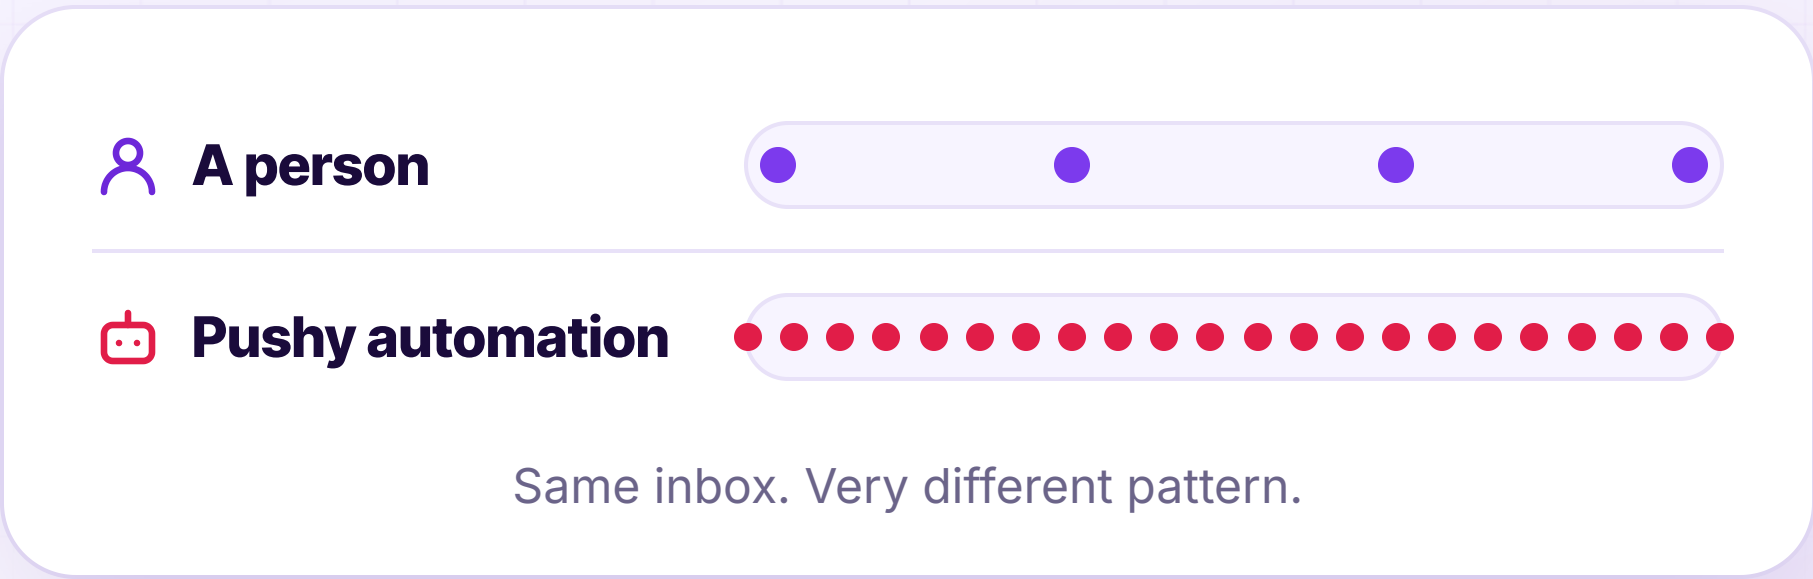

Scripted DM blasts	HIGH RISK
Tools that take over the account	HIGH RISK
Type-your-answer chat menus	DROP-OFF
One auto-reply with a button	SAFE

Vishan Amarnath · Co-founder & CTO, Bizzzauto

FIRST, THE WHY

Instagram watches how an account behaves.

When software sends DMs faster, longer or more often than a person would, the account starts to look like a bot. **Bots get restricted.**

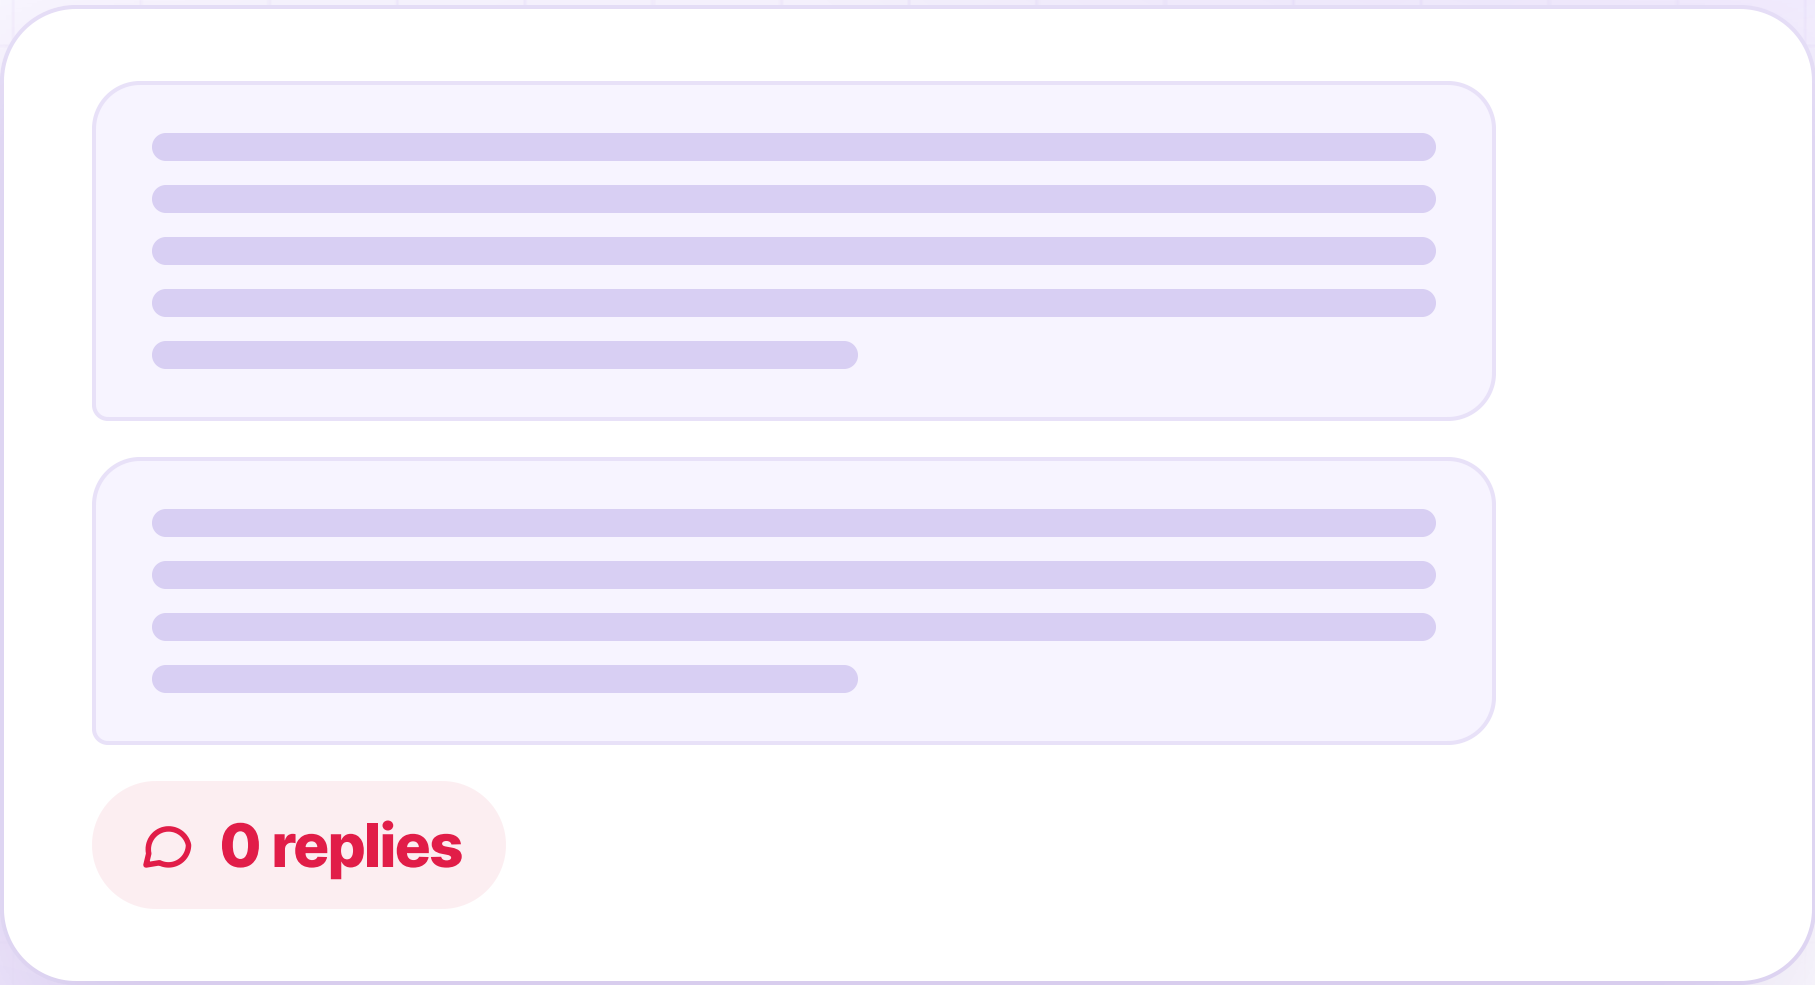

SETUP 01 OF 03

HIGH RISK

Long scripted DMs, blasted at every commenter

Risky for the account. And one client who tried it got **zero replies.**

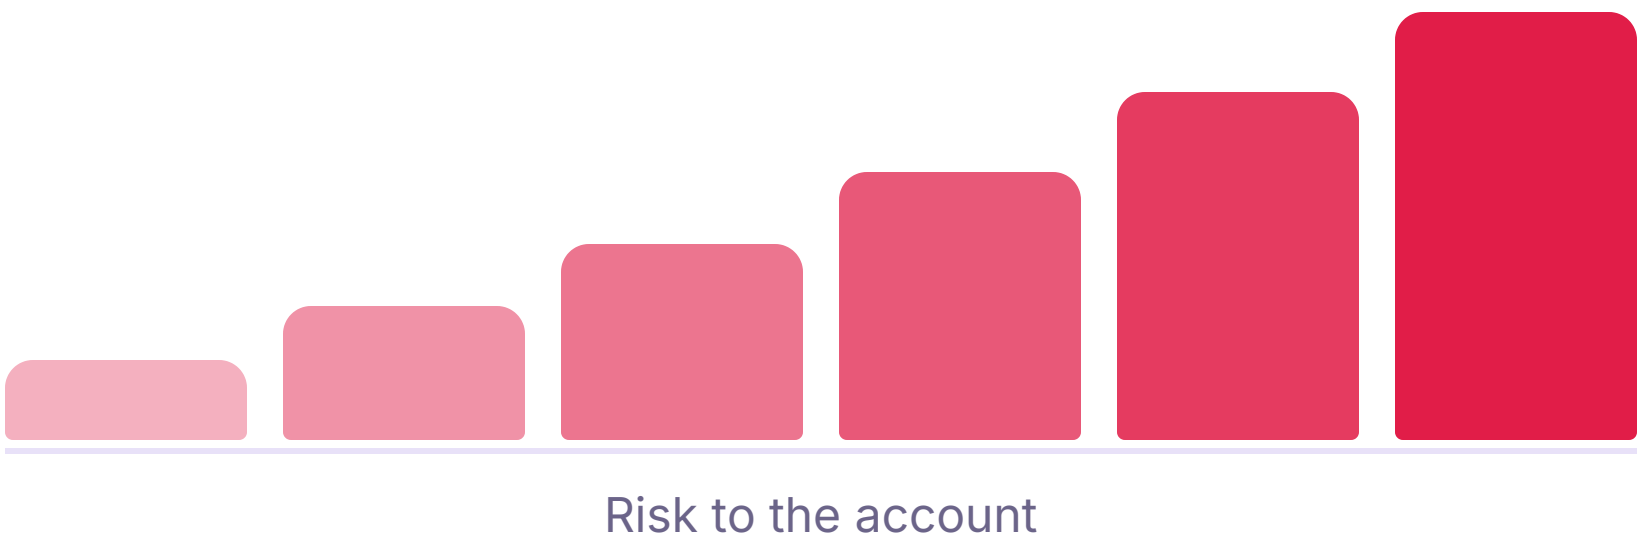

Vishan Amarnath · Co-founder & CTO, Bizzzauto

SETUP 02 OF 03

⚠ HIGH RISK

Outside tools that take over the account

They act on the account by themselves. **The heavier the automation, the higher the risk.**

SETUP 03 OF 03

LOW RISK, BIG DROP-OFF

Chat menus that make customers type their answers

They don’t get you banned. **But most people drop off halfway.**

Vishan Amarnath · Co-founder & CTO, Bizzzauto

WHAT WE USE INSTEAD

SAFE

One auto-reply. One button. That’s it.

1

Instagram’s own auto-reply sends one short message

Nothing unusual for Instagram to flag.

2

The message carries a button, not a raw link

Tapping it opens WhatsApp with a message already typed.

3

The customer hits send

Our system captures the lead and assigns it.

THE IDEA

Instagram starts the conversation. WhatsApp holds it.

- The customer types nothing.
- The account stays safe.
- The business gets a real phone number, not a DM thread to dig through.

How are you handling Instagram DMs right now?
